

## Messenger USB

The Messenger® USB is a digital audio playback system designed to provide a continuous-play audio source for message and music on hold applications. Audio files are stored on industry standard USB flash drives and capable of full CD quality playback.

Audio content is easily managed by plugging the USB flash drive into a PC or MAC computer's USB port and "dragging and dropping" MP3 files to the drive. Once the files are copied to the drive, simply insert into the Messenger USB. You can receive new and updated message on hold productions via e-mail or download from our secure web site, providing fast turnaround.

flash drive included
