

Sonorous 2.0

The Sonorous® v2.0 is a state-of-the-art digital audio recording and playback system designed to provide a continuous play audio source for On Hold Messaging and Music. The audio content is loaded from a CD burned as a DATA CD with standard MP3 files onto high-density flash memory using a pure digital-to-digital file transfer. AMS will burn and ship the CD or email the audio file for CD burning at your site. Simply insert the CD in the Sonorous tray. The unit loads the audio into internal memory for trouble free playback over your phone system.

CD-Rom Digital Announcer
